Schlumberger Chair Professor; Winner of the 2010 Class of 1940 W. Howard Ector Outstanding Teacher Award and the 2013 Class of 1934 Distinguished Professor Award

This course seeks to prepare students for leadership in a globally-focused, multi-cultural technological world by ensuring their religious literacy and engaging in meaningful dialogue on contemporary topics spanning the boundaries of science, engineering and religion, particularly within the context of multi-faith diversity. The course addresses foundational material in the on-going dialogue between scientific and religious worldviews, as well as reading, research and in-depth discussion of wide variety of contemporary topics spanning science and religion (the specific topics addressed are student-prioritized). Service learning, including both site visits within the local Atlanta interfaith community as well as a community service project, will be included.

**Important Note: You must contact the professor for permission to register.*
